

KM5GZ Inventory & Bid worksheet

We are taking written bids and offers now through April 13th.

Open House sale and item pickup 10-1500 on April 18th.

3612 NE 140th Street, Edmond, 73013. (East of Memorial and Bryant)

It is now time! Bob Coxsey's (KM5GZ, silent key) ham radio and electronics estate is now available. For those that don't know, Bob has a fantastic inventory of hundreds of new & used components, accessories, connectors, etc. As well as a well-established collection of used gear.

An Open House will be held at Bob's house on April 18th where you can pay for and collect your purchase and any winning bids. We specifically want to minimize individual meetups.

Bidding Process:

If you have interest in any of the items listed on the bid worksheet, inquire at km5gz@n5ret.us. Please include your name, call sign, phone number, Item # and \$\$ bid/offer. We are accepting bids and offers through April 13th. We will acknowledge your inquire and notify each person if they won the item before the Open House.

Details:

Bob also has a collection of spare parts for various projects. He enjoyed servicing old tube amps and power supplies and he has all the equipment and components for these types of projects in abundance (as well as a healthy bone pile of all the things you may need one day). The bulk of the available equipment is numbered and listed on the KM5GZ Inventory and Bid worksheet below.

At the moment, the condition of each is unknown (unless stated otherwise). Bob may have had it in perfect working order, or it might be something he had planned to work on later. Some limited testing has been completed on some items to get an indication of their condition, but we are not checking calibration or verifying full power output or validating that each mode functions on each item. Some antennas will also be available for sale at the Open House. There will be opportunity to explore and examine items at the Open House.

John Garnett (N5RET) will also have a table at the open house (items listed at the bottom).

Thank you all for your interest and support,

Sharon KM5GV & John N5RET.

		Loads of components (resisters, caps, diodes, tubes, etc.), small tools, electronics repair items, wire, connectors and couplers of all sorts, heat shrink, ground strap, misc. items, spare parts, etc. These items will be available and on display at the open house sale & pickup day. Apr 18 th .			

MBR-N (No. wall in master bedroom) **MBR-Dsk** (Desk in Master Bedroom) **MBR-UBd** (Under bed in Master Bedroom) **ENDBR** (NE room in house) (Low Shelf = Shelf under table on east side of room) (Tall Shelves on west wall of room)) **LR** (Living Room) **DR** (Dining Room)

N5RET SPECIAL TABLE

John Garnett ([N5RET](#)) will also have a table of items available for sale at the Open House on April 18th that are of interest to anyone setting up a station. Send inquiries to qrz@secure.n5ret.us

We have several industrial quality **Shuttle series micro PCs** (slim- one liter size) that can support either Linux or Windows 7 or 10 for those that prefer this style & generation of technology. Variety of fully refurbished computers will be priced from about \$140-260,

depending on specs & formfactor. (Will ship with Win 10). Generally i5 7th - 9th generation CPU. All have 8-16GB RAM. Nearly all have 256GB to 512GB SSD. These specs are excellent & sufficient for most amateur station requirements and especially useful for creating air-gapped and off-line systems. I have a supply of these systems and can custom build to suit your needs, if required. These systems are retired from an environment that we designed, supported, and maintained and I therefore know the history and condition of each system. (VERSA compatible mount bracket included upon request)

* The image above is for general size & design concept reference. We have a variety of models that may be available including the Shuttle slim DH170, DH370, DS81, DH270, & some other formfactors as well.

Radio: excellent sounding and good looking **ICOM IC-756PROII**, tested all modes and working, and bundled with an IC-SM6 desk mic- in great operating condition (\$740).

Yaesu YO-301 **Monitor Scope**- tested and working (\$80).

Rugged Laptop: Getac V110 Ruggedized Gen6 laptop, fully refurbished & tested (tablet convertible mode). 10th Gen Intel I5, 16GB RAM, 512GB SSD, touchscreen, hot-swappable batteries, (\$970). Fully field serviceable: can field swap drives, batteries, accessories, RAM, etc. Touchscreen can be read in sunlight. Loaded with Win11. Linux compatible. This system is an excellent value. The batteries are used and life-expectancy is not guaranteed, however, I am including two sets of two hot-swappable batteries (four total). I have found this to be totally sufficient to last me 5-6 hours of field operations. (new batteries can be purchased online through Getac or others). I have multiple available. Image is for reference only. All units have seen field use.

We have several displays/monitors of different sizes and priced to move. We have smaller space-saving sizes around 17" through larger 27" displays. A couple displays are swivel and height adjustable.
